

Concept Mapping

Instructions

Review the session's content by **defining key terms** and linking them in a **concept map**.

1. Define key terms. Write a brief (~1 sentence) definition of each of the terms below.
2. Link terms in a concept map. On the reverse of this page are a series of blank boxes connected by arrows. Each arrow describes the link between the concepts.

Key terms

Term	Definition
version control	Software for tracking the evolution of files in a project
local repository	A git project that lives on your computer
git	The most widespread version control software
remote repository	A copy of your local repository that lives on a server
github	A website that hosts git remote repositories
working directory	The directory on your computer being tracked by a local repository
staging area	An intermediate area between the working directory and the local repository
sanity	The thing you'll lose if you don't use version control
